

Variable anatomy & function of the arm's alternate lymphatic pathway

Researchers from the Boston Lymphatic Center at Beth Israel Deaconess Medical Center are conducting a study to identify normal variation in lymphatic anatomy in the upper extremities of female breast cancer survivors

This study may be a good fit for you if you: are female and at least 18 years old, have a history of breast cancer and have undergone axillary lymph node dissection (ALND) **without** developing chronic lymphedema

If you decide to take part in the research study, you would: be examined by a physical therapist and participate in 2 days of imaging studies at BIDMC

Location of Research: BIDMC East Campus located at 330 Brookline Ave, Boston, MA 02215

To compensate for time and travel, participants will receive \$300 for completing the study and complimentary parking

The Principal Investigator is: Dhruv Singhal, MD

To take part in this research study or for more information:
